

iWi (inseko Web interface) was designed as an alternative environment for work with maintenance management IS, which provides performing maintenance workers (servicemen) with easy, clear and intuitive form of recording all necessary entries about maintenance performance in a way that servicemen are minimally burdened with administration of relating performance records and at the same time it provides enough information needed for operational management of maintenance processes and for evaluation and reporting of maintenance status and maintained equipment status needs.

iWi approaches information system to serviceman and provide him with all necessary information about work orders, equipment and working procedures. It mediates the possibility observe directly during repairs schemes and equipment connections. By means of iWi serviceman is informed on-line about a summary of tasks, which he is obliged to perform, it enables to managing maintenance workers operational management of maintenance processes, to change priorities and plan maintenance activities on the basis of real status of requirements solving.

iWi can be connected with automated systems for inventory management (Rotomat, shelves folders etc.). Serviceman directly from the place of performance has an overview about spare parts, their availability, and placement and can directly communicate with warehouse.

iWi Basic modules:

➤ **For maintenance workers:**

- **iWi-PDA** – mobile maintenance – online- for Windows Phone, Android, iPhone
- **iWi-PANEL** – mobile maintenance – online- for industrial PCs and touch panels
- **iWi-MTZ** – for work and inventory management

iWi-PDA

work records are done directly on the portable device in ON-LINE mode, mobile office

iWi-PANEL

work records are done on determined places in production in ON-LINE mode, all necessary information as well as actions' history is available to worker

➤ **For management:**

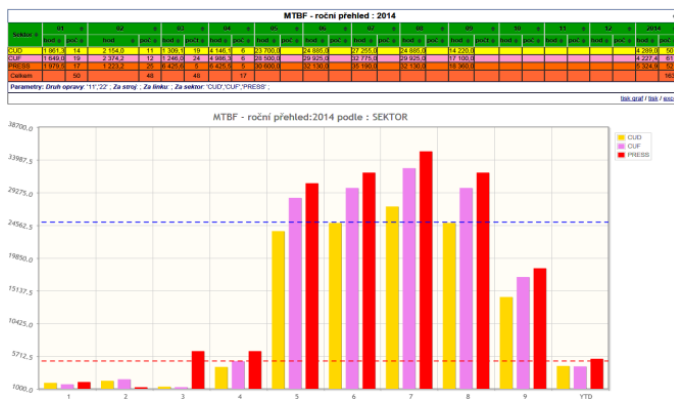

- **iWi-MANAGER** – operational management, planning on monthly and daily basis
- **iWi-REPORT** – evaluation and reporting with the possibility of data export to MS Excel

iWi-MANAGER

maintenance management in real time
(supporting DRAG&DROP)

iWi-REPORT

creation of prepared reports for selected time period on the basis of selected parameters (MTTR, MTBF, Ratio of maintenance types, Workers effectivity etc.)

➤ **For production:**

- **iWi-REQUESTOR** – recording production requirements on maintenance (breakdowns' messages) – for industrial PCs and touch panels

iWi-REQ

breakdowns' messages by operator

iWi-REQ

summary of operators' messages with the information about the requirements' status

iWi was created for cooperation with IS for maintenance management from various providers like INFOR, SAP, IBM.
